

NOC Operations Guide

CPU Utilization

Check top process, restart approved service, escalate if >95% persists.

Memory Utilization

Inspect RAM/swap, identify leaks, restart application if needed.

Disk Space

Clean logs, archive files, extend filesystem if required.

Server Down

Ping host, verify VM power, check monitoring, escalate hardware issues.

Network

Investigate port down, link flapping, latency, packet loss, SFP and cables.

Database

Check listener, tablespace, sessions, restart listener if required.

Windows

Review Event Viewer, restart failed services.

Linux

Use systemctl, journalctl, top, df -h, free -m.

Escalation

Document hostname, alert, impact, actions taken, logs, screenshots.
